

First Response Australia

News Flash

QuikClot®

- ★ QuikClot® 1st Response acts as a selective molecular sponge.
- ★ It is biologically inert, inorganic, and traps water molecules by hydrogen bond formation in a molecular cage.
- ★ QuikClot® causes rapid localized coagulation and the formation of a stable blood clot in a variety of wounds.
- ★ It does not absorb into the body, and is safe to leave in the wound until further medical care is available.
- ★ QuikClot® controls bleeding faster than conventional methods.

- Stops bleeding fast
- New cooler formula
- Battlefield-proven technology
- Easy to apply
- Fast, clean removal in post trauma
- Each box contains five individually packaged 25 gram hemostatic sponges
